Pacer Lunt Large Cap Alternator ETF

A strategy-driven large cap exchange traded fund (ETF) that seeks to track the investment returns of an index that alternates exposure between low volatility and high beta stocks in the S&P 500 Index.

STRATEGY OVERVIEW

An objective, rules-based strategy that is re-evaluated monthly to see whether a rotation should occur between the S&P 500 Low Volatility Index and the S&P 500 High Beta Index based on a relative strength signal. The index is weighted by factor.

*ETF implied liquidity is a representation of how many shares can potentially be traded daily in an ETF as portrayed by the creation unit. This is defined as the smallest value of the IDTS (Implied Daily Tradable Shares) for each holding in the creation unit.

NAV (net asset value) is the value of one share of the Fund calculated daily. The NAV return is based on the NAV of the Fund. It may not reflect the actual return for the investor.

Market Price is the price investors can buy and sell ETF shares for in the stock market and is used to calculate market return. It is based on the price at the listed exchange market close. This is when NAV is determined for most ETFs. If shares trade at another time, the return may differ. Market and NAV returns assume that dividends and capital gain distributions have been reinvested in the Fund at Market Price and NAV, respectively.

Before investing you should carefully consider the Fund's investment objectives, risks, charges, and expenses. This and other information is in the prospectus. A copy may be obtained by visiting www.paceretfs.com or calling 1-877-337-0500. Please read the prospectus carefully before investing.

An investment in the Funds is subject to investment risk, including the possible loss of principal. Pacer ETF shares may be bought and sold on an exchange through a brokerage account. Brokerage commissions and ETF expenses will reduce investment returns. There can be no assurance that an active trading market for ETF shares will be developed or maintained. The risks associated with this fund are detailed in the prospectus and could include factors such as alternator strategy risk, calculation methodology risk, equity market risk, ETF risks, high portfolio turnover risk, large-capitalization investing risk, monthly exposure risk, non-diversification risk, passive investment risk, sector risk, tracking risk and/or special risks of exchange traded funds.

Alternator Strategy Risk: Because the Index will be comprised of only one Sub-Index each month, the Index may be comprised of low volatility securities during a period when such securities underperform high beta securities, or vice versa.
