Before you invest, you may want to review the Pacer CFRA-Stovall Equal Weight Seasonal Rotation ETF's (the "Fund") statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated July 16, 2018, are incorporated by reference into this Summary Prospectus. You can find the Fund's statutory prospectus, statement of additional information and other information about the Fund online at www.paceretfs.com/media/. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

The Pacer CFRA-Stovall Equal Weight Seasonal Rotation ETF (the "Fund") is an exchange traded fund ("ETF") that seeks to track the total return performance, before fees and expenses, of the Pacer CFRA-Stovall Equal Weight Seasonal Rotation Index (the "Index").

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets. This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Fund shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.60%
Distribution and/or Service (12b-1) Fees	None
Other Expenses*	0.00%
Total Annual Fund Operating Expenses	0.60%

* Estimated for the current fiscal year.

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they were to invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

1 Year	3 Years
\$61	\$192

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies of the Fund

The Fund employs a "passive management" (or indexing) investment approach designed to track the total return performance, before fees and expenses, of the Index. The Index is based on a proprietary methodology developed by CFRA, a leading independent investment research firm.

The Index

The Index uses an objective, rules-based methodology to track the performance of a semi-annual rotation of certain sectors within the S&P 500 Equal Weight Index (“EWI”). The S&P 500 EWI is an equal-weighted version of the S&P 500®, which measures the performance of the large-cap segment of the U.S. equity market. The S&P 500 EWI includes stocks covering all 11 Global Industry Classification Standard (“GICS®”) sectors, six of which are eligible for inclusion in the Index as described below.

On the last business day of each April, the Index is equally weighted in the S&P 500 EWI Consumer Staples and Healthcare sectors. The Index holdings then float until the last business day of the following October, when the Index is reconstituted and rebalanced to an equal weighting in the S&P 500 EWI Consumer Discretionary, Industrials, Information Technology, and Materials sectors. The Index holdings then float until the last business day of the following April (the next calendar year), when the Index is reconstituted and rebalanced back to an equal weighting in the S&P 500 EWI Consumer Staples and Healthcare sectors.

S&P 500 EWI Sector Rotation Schedule

January 1 – April 30		May 1 – October 31		November 1 – December 31
Consumer Discretionary Industrials Information Technology Materials	Rebalance	Consumer Staples Healthcare	Rebalance	Consumer Discretionary Industrials Information Technology Materials

At the time of each reconstitution of the Index, the Index is equally weighted in the applicable S&P 500 EWI sectors. Within each sector allocation, the weight of each individual stock is identical to its proportion of the applicable sector weight in the S&P 500 EWI. For example, on the last business day of each April, the Index is reconstituted to include the individual stock components of the S&P 500 EWI Consumer Staples and Healthcare sectors, and the sum of the weight of the individual stock components of the S&P 500 EWI Consumer Staples sector will equal the sum of the weight of the individual stock components of the S&P 500 EWI Healthcare sector.

The Fund’s Investment Strategy

Under normal circumstances, at least 80% of the Fund’s total assets (exclusive of collateral held from securities lending) will be invested in the component securities of the Fund’s underlying Index or in one or more ETFs that track the performance of all or a portion of such component securities in the same approximate proportion as in the Fund’s underlying Index. The Fund’s investment adviser expects that, over time, the correlation between the Fund’s performance and that of the Index, before fees and expenses, will be 95% or better.

The Fund will generally use a “replication” strategy to achieve its investment objective, meaning it will invest in all of the component securities of the Index.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks summarized below. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund’s prospectus entitled “Additional Information about the Principal Risks of Investing in the Funds.”

- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change.
- **High Portfolio Turnover Risk.** The Index rules are expected to result in an effective portfolio turnover rate of at least 200% annually. However, SEC rules regarding the calculation of the Fund’s portfolio turnover rate require the Fund to exclude the effect of certain transactions, such as the in-kind receipt or delivery of securities, and consequently, the Fund

may report a portfolio turnover rate substantially less than 200%. A high portfolio turnover rate would result in correspondingly greater transaction expenses, including brokerage commissions, dealer mark ups and other transaction costs, on the sale of securities and on reinvestment in other securities and may result in reduced performance and the distribution to shareholders of additional capital gains for tax purposes. Additionally, twice each year the Index rules require the Fund to turn over its entire portfolio at one time, which may create additional risks for the Fund. These factors may negatively affect the Fund's performance.

- **Large-Capitalization Investing Risk.** The Fund may invest in the securities of large-capitalization companies. As a result, the Fund's performance may be adversely affected if securities of large-capitalization companies underperform securities of smaller-capitalization companies or the market as a whole. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion.
- **New Fund Risk.** The Fund is new with no operating history. As a result, there can be no assurance that the Fund will grow to or maintain an economically viable size, in which case it may experience greater tracking error to its Index than it otherwise would at higher asset levels, or it could ultimately liquidate. The Fund's distributor does not maintain a secondary market in Fund shares.
- **Non-Diversification Risk.** Although the Fund intends to invest in a variety of securities and instruments, the Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.
- **Other Investment Companies Risk.** The Fund will incur higher and duplicative expenses when it invests in other investment companies such as ETFs. There is also the risk that the Fund may suffer losses due to the investment practices of the underlying funds. When the Fund invests in other investment companies, the Fund will be subject to substantially the same risks as those associated with the direct ownership of securities held by such investment companies. Investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; and (iii) trading of an ETF's shares may be halted for a number of reasons.
- **Passive Investment Risk.** The Fund is not actively managed and the Fund's investment adviser would not sell a security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index in accordance with the Index methodology. The Fund invests in securities included in, the Index, regardless of their investment merits. The Fund does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Fund.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors.
 - *Consumer Discretionary Sector Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics, and consumer preferences. Companies in the consumer discretionary sector depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns.
 - *Consumer Staples Sector Risk.* The permissibility of using various food additives and production methods, fads, marketing campaigns, and other factors affecting consumer demand is tied closely to the performance of companies in this sector. In particular, tobacco companies may be adversely affected by new laws, regulations, and litigation. The consumer staples sector may also be adversely affected by changes or trends in commodity prices, which may be influenced or characterized by unpredictable factors.
 - *Health Care Sector Risk.* Companies in the health care sector are subject to extensive government regulation, and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, and an increased emphasis on the delivery of healthcare through outpatient services.

- *Industrials Sector Risk.* The industrials sector may be affected by changes in the supply of and demand for products and services, product obsolescence, claims for environmental damage or product liability, and general economic conditions, among other factors.
- *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation, and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.
- *Materials Sector Risk.* Companies in the materials sector could be adversely affected by commodity price volatility, exchange rates, import controls and increased competition. Production of industrial materials often exceeds demand as a result of overbuilding or economic downturns, leading to poor investment returns. Companies in the materials sector are at risk for environmental damage and product liability claims. Companies in the materials sector may be adversely affected by depletion of resources, technical progress, labor relations, and government regulations.
- **Sector Rotation Risk.** Because the Index generally only changes its exposure to certain sectors semi-annually, the Index, and consequently the Fund, may be significantly exposed for short or long periods of time to sectors that underperform the broader equity market and may have no exposure to the strongest performing sectors of the market.
- **Shares of the Fund May Trade at Prices Other Than NAV.** As with all ETFs, Fund shares may be bought and sold in the secondary market at market prices. The price of Fund shares, like the price of all traded securities, will be subject to factors such as supply and demand, as well as the current value of the Fund's portfolio holdings. Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant.
- **Tracking Risk.** The Fund's return may not track the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, when the Fund uses a representative sampling approach, the Fund may not be as well correlated with the return of the Index as when the Fund purchases all of the securities in the Index in the proportions in which they are represented in the Index.

Fund Performance

Performance information for the Fund is not included because the Fund did not have a full calendar year of performance prior to the date of this Prospectus. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.paceretfs.com or by calling the Fund toll-free at 1-877-337-0500.

Management

Investment Adviser

Pacer Advisors, Inc. (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers

The Fund employs a rules-based, passive investment strategy. The Adviser uses a committee approach to managing the Fund. Bruce Kavanaugh, Vice President of the Adviser, and Michael Mack, Investment Analyst for the Adviser, have primary responsibility for the day-to-day management of the Fund and have served as Fund portfolio managers since the Fund's inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (“Creation Units”), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 50,000 shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash that the Fund specifies each day.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account or other tax-advantaged account. Distributions may be taxable upon withdrawal from tax-deferred accounts.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Fund through a broker or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for activities related to the marketing and promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary’s website for more information.
