

**Pacer Trendpilot<sup>®</sup> European Index ETF**

**Trading Symbol: PTEU**  
**Listed on Cboe BZX Exchange, Inc.**

*Summary Prospectus*  
*August 31, 2019*

**www.paceretfs.com**

Before you invest, you may want to review the Fund’s prospectus and statement of additional information (“SAI”), which contain more information about the Fund and its risks. The current prospectus and SAI dated August 31, 2019, are incorporated by reference into this summary prospectus. You can find the Fund’s prospectus, reports to shareholders, and other information about the Fund online at [www.paceretfs.com/media/](http://www.paceretfs.com/media/). You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to [ETF@usbank.com](mailto:ETF@usbank.com).

**IMPORTANT NOTE:** Beginning on January 1, 2021, paper copies of the Fund’s shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the shareholder reports from your financial intermediary, such as a broker-dealer or bank. Instead, the shareholder reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

You may elect to receive all future Fund shareholder reports in paper, free of charge. If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

**Investment Objective**

The Pacer Trendpilot<sup>®</sup> European Index ETF (the “Fund”) is an exchange traded fund (“ETF”) that seeks to track the total return performance, before fees and expenses, of the Pacer Trendpilot European Index (the “Index”).

**Fees and Expenses of the Fund**

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund’s average net assets. This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Fund shares.

|   |              |
|---|--------------|
| <b>Annual Fund Operating Expenses</b> (expenses that you pay each year as a percentage of the value of your investment) |              |
| Management Fees   | 0.65%        |
| Distribution and/or Service (12b-1) Fees  | None         |
| Other Expenses  | 0.00%        |
| <b>Total Annual Fund Operating Expenses</b>   | <b>0.65%</b> |

**Example**

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they were to invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

|               |                |                |                 |
|---------------|----------------|----------------|-----------------|
| <b>1 Year</b> | <b>3 Years</b> | <b>5 Years</b> | <b>10 Years</b> |
| \$66          | \$208          | \$362          | \$810           |

## **Portfolio Turnover**

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal year ended April 30, 2019, the Fund’s portfolio turnover rate was 396% of the average value of its portfolio.

## **Principal Investment Strategies of the Fund**

The Fund employs a “passive management” (or indexing) investment approach designed to track the total return performance, before fees and expenses, of the Index. The Index is based on a proprietary methodology developed and maintained by Index Design Group (the “Index Provider”), an affiliate of Pacer Advisors, Inc., the Fund’s investment adviser (the “Adviser”).

### *The Index*

The Index uses an objective, rules-based methodology to implement a systematic trend-following strategy that directs exposure (i) 100% to the FTSE Eurozone Index, (ii) 50% to the FTSE Eurozone Index and 50% to 3-Month US Treasury bills, or (iii) 100% to 3-Month US Treasury bills, depending on the relative performance of the FTSE Eurozone Index and its 200-business day historical simple moving average (the “200-day moving average”). The calculation of the 200-day moving average for the FTSE Eurozone Index is based on the total return version of the FTSE Eurozone Index and reflects the reinvestment of dividends paid by the securities in the FTSE Eurozone Index. The Index is expected to be predominantly invested in the components of the FTSE Eurozone Index over most short- and long-term periods and is only expected to invest in 3-Month US Treasury bills from time to time in response to adverse market conditions as defined by the “50/50 Indicator” and “T-Bill Indicator” below.

The FTSE Eurozone Index is a rules-based, float-adjusted, market capitalization-weighted index comprised of large- and mid-capitalization stocks providing coverage of the developed markets in the euro zone, including primarily France, Germany, Spain, the Netherlands, and Italy. The FTSE Eurozone Index is a subset of the FTSE Global Equity Index Series, which covers 98% of the world’s investable market capitalization.

The Index, and consequently the Fund, may stay in any of its three possible positions for an extended period of time. As described below, the Index will change its position based on the following indicators, and each change will become effective at the close of business on the first business day after the indicator for the change is triggered. The Index will be in a new position effective on the second business day.

**Equity Indicator.** When the FTSE Eurozone Index closes above its 200-day moving average for five consecutive business days (the “Equity Indicator”), the exposure of the Index will be 100% to the FTSE Eurozone Index, effective at the close of business on the first business day following the date of the Equity Indicator. The Index will be in a new position effective on the second business day.

Once the Equity Indicator has been triggered, the exposure of the Index will next change to either be 50% to the FTSE Eurozone Index and 50% to 3-Month US Treasury bills if the 50/50 Indicator (described below) is triggered or 100% to 3-Month US Treasury bills if both the 50/50 Indicator and the T-Bill Indicator (described below) are triggered simultaneously, effective at the close of business on the first business day following the date of the indicator(s). The Index will be in a new position effective on the second business day.

**50/50 Indicator.** When the FTSE Eurozone Index closes below its 200-day moving average for five consecutive business days (the “50/50 Indicator”), the exposure of the Index will be 50% to the FTSE Eurozone Index and 50% to 3-Month US Treasury bills, effective at the close of business on the first business following the date of the 50/50 Indicator. The Index will be in a new position effective on the second business day. Following the effectiveness of the 50/50 Indicator, the exposure of the Index may be greater than or less than 50% with respect to the FTSE Eurozone Index and 3-Month US Treasury bills depending on their respective performance until either the Equity Indicator or T-Bill Indicator (described below) is triggered.

Once the 50/50 Indicator has been triggered, the exposure of the Index will next change to either be 100% to the FTSE Eurozone Index if the Equity Indicator is triggered or 100% to 3-Month US Treasury bills if the T-Bill Indicator (described below) is triggered, effective at the close of business on the first business following the date of the indicator. The Index will be in a new position effective on the second business day.

**T-Bill Indicator.** When the FTSE Eurozone Index's 200-day moving average closes lower than its value from five business days earlier (the "T-Bill Indicator") and the 50/50 Indicator has been triggered, the exposure of the Index will be 100% to 3-Month US Treasury bills, effective at the close of business on the first business day following the date of the T-Bill Indicator. The Index will be in a new position effective on the second business day.

For example, if today is Wednesday and the FTSE Eurozone Index's 200-day moving average closes lower than it did on the fifth preceding business day (Wednesday of the preceding week), the T-Bill Indicator is triggered. Unlike the operation of the Equity Indicator and 50/50 Indicator, the closing values on the days in between today and the fifth preceding business day do not affect whether the T-Bill Indicator has been triggered; rather, the T-Bill Indicator simply compares today's closing value to the closing value five business days earlier. However, the Index will not move directly from 100% exposure to the FTSE Eurozone Index to 100% exposure to 3-Month US Treasury bills unless the 50/50 Indicator was simultaneously triggered following the most recent triggering of the Equity Indicator.

Once the T-Bill Indicator has been triggered, the exposure of the Index will next change to be 100% to the FTSE Eurozone Index if the Equity Indicator is triggered, effective at the close of business on the first business following the date of the indicator. Once the T-Bill Indicator has been triggered, the Index will not return to its 50/50 position unless the Equity Indicator is first triggered, followed by the 50/50 Indicator being triggered. The Index will be in a new position effective on the second business day.

The Index aims to mitigate, to some extent, the volatility of the FTSE Eurozone Index by tracking 3-Month US Treasury bills (instead of the FTSE Eurozone Index) when the FTSE Eurozone Index is in a negative trend.

#### *The Fund's Investment Strategy*

Under normal circumstances, at least 80% of the Fund's total assets (exclusive of collateral held from securities lending) will be invested in the component securities of the Index and investments that have economic characteristics that are substantially identical to the economic characteristics of such component securities (e.g., depositary receipts). The Adviser expects that, over time, the correlation between the Fund's performance and that of the Index, before fees and expenses, will be 95% or better.

The Fund will generally use a "replication" strategy to achieve its investment objective, meaning it will invest in all of the component securities of the Index in the same approximate proportion as in the Index.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

#### **Principal Risks of Investing in the Fund**

You can lose money on your investment in the Fund. The Fund is subject to the risks summarized below. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund's prospectus entitled "Additional Information about the Principal Risks of Investing in the Funds."

- **Calculation Methodology Risk.** The Index relies directly or indirectly on various sources of information to assess the criteria of issuers included in the Index, including information that may be based on assumptions and estimates. Neither the Fund, the Index Provider, or the Adviser can offer assurances that the Index's calculation methodology or sources of information will provide an accurate assessment of included issuers or a correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the Index.
- **Currency Exchange Rate Risk.** The Fund's assets may include investments denominated in non-U.S. currencies, such as the euro, or in securities or other assets that provide exposure to such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific industries, sectors or companies in which the Fund invests. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change.
- **ETF Risks.** The Fund is an ETF and, as a result of an ETF’s structure, is exposed to the following risks:
  - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares of the Fund may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares of the Fund.* Due to the costs of buying or selling shares of the Fund, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of shares of the Fund may significantly reduce investment results and an investment in shares of the Fund may not be advisable for investors who anticipate regularly making small investments.
  - *Shares of the Fund May Trade at Prices Other Than NAV.* As with all ETFs, shares of the Fund may be bought and sold in the secondary market at market prices. The price of shares of the Fund, like the price of all traded securities, will be subject to factors such as supply and demand, as well as the current value of the Fund’s portfolio holdings. Although it is expected that the market price of the shares of the Fund will approximate the Fund’s NAV, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund trade on foreign exchanges that are closed when the Fund’s primary listing exchange is open, the Fund is likely to experience premiums and discounts greater than those of domestic ETFs.
  - *Trading.* Although shares of the Fund are listed for trading on a national securities exchange, such as Cboe BZX Exchange, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that shares of the Fund will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of shares of the Fund may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than shares of the Fund.
- **European Investments Risk.** The Fund is more exposed to the economic and political risks of Europe and of the European countries in which it invests than funds whose investments are more geographically diversified. Adverse economic and political events in Europe may cause the Fund’s investments to decline in value. The economies and markets of European countries are often closely connected and interdependent, and events in one country in Europe can have an adverse impact on other European countries. The Fund makes investments in securities of issuers that are domiciled in, or have significant operations in, member countries of the European Union (the “EU”) that are subject to economic and monetary controls that can adversely affect the Fund’s investments. The European financial markets have experienced volatility and adverse trends in recent years and these events have adversely affected the exchange rate of the euro and may continue to significantly affect other European countries. Decreasing imports or exports, changes in governmental or EU regulations on trade, changes in the exchange rate of the euro, the default or threat of default by an EU member country on its sovereign debt, and/or an economic recession in an EU member country may have a significant adverse effect on the economies of EU member countries and their trading partners, including some or all of the European countries in which the Fund invests.

At a referendum in June 2016, the United Kingdom (“UK”) voted to leave the EU. On March 29, 2017, the UK formally notified the European Council of its intention to withdraw from the EU (known as “Brexit”) within two years after providing such notice, leading to an official date for Brexit of March 29, 2019. However, on March 29, 2019, the Parliament of the UK voted down a formal plan whereby the UK would withdraw from the EU without any agreements in place regarding future dealings between the governments of both parties, as well as their respective businesses. The EU has since granted the UK an extension to allow it to remain a member of the EU through October 31, 2019, subject to certain conditions (including the UK’s participation in European parliamentary elections in May 2019), to provide the UK additional time to further negotiate such agreements with the EU. Negotiations are ongoing and subject to further developments.

During this period and beyond, the impact on the UK and European economies and the broader global economy could be significant, resulting in negative impacts, such as increased volatility and illiquidity, potentially lower economic growth on markets in the UK, Europe, and globally, and changes in legal and regulatory regimes to which certain Fund assets are or become subject, any of which may adversely affect the value of Fund investments. Also as a result of the referendum, on June 27, 2016, Standard & Poor’s (“S&P”) downgraded the UK’s credit rating from “AAA” to “AA” with a “negative outlook,” and on June 30, 2016, S&P downgraded the EU’s credit rating from “AA+” to “AA”. Other credit ratings agencies have taken similar actions.

The effects of Brexit will depend, in part, on agreements the UK negotiates to retain access to EU markets, either during a transitional period or more permanently, including, but not limited to, current trade and finance agreements. Brexit could lead to legal and tax uncertainty and potentially divergent national laws and regulations, as the UK determines which EU laws to replace or replicate. The extent of the impact of the withdrawal negotiations in the UK and in global markets, as well as any associated adverse consequences, remain unclear, and the uncertainty may have a significant negative effect on the value of Fund investments. If one or more other countries were to exit the EU or abandon the use of the euro as a currency, the value of investments tied to those countries or the euro could decline significantly and unpredictably.

- **Fixed Income Risk.** The value of the Fund’s direct or indirect investments in fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. On the other hand, if rates fall, the value of the fixed income securities generally increases. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. The value of the Fund’s direct or indirect investments in fixed income securities may be affected by the inability of issuers to repay principal and interest or illiquidity in debt securities markets.
- **Foreign Securities Risk.** Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.
- **Geographic Concentration Risk.** To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region. The Index’s, and therefore the Fund’s, heavy equity exposure to two countries (France and Germany) subjects the Fund to a higher degree of country risk than that of more geographically diversified international funds.
- **Government Obligations Risk.** The Fund may invest in securities issued by the U.S. government. There can be no guarantee that the United States will be able to meet its payment obligations with respect to such securities. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.
- **High Portfolio Turnover Risk.** At times, the Fund may have a portfolio turnover rate substantially greater than 100%. A high portfolio turnover rate would result in correspondingly greater transaction expenses, including brokerage commissions, dealer mark ups and other transaction costs, on the sale of securities and on reinvestment in other securities and may result in reduced performance and the distribution to shareholders of additional capital gains for tax purposes. These factors may negatively affect the Fund’s performance.

- **Large-Capitalization Investing Risk.** The Fund may invest in the securities of large-capitalization companies. As a result, the Fund's performance may be adversely affected if securities of large-capitalization companies underperform securities of smaller-capitalization companies or the market as a whole. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion.
- **Mid-Capitalization Investing Risk.** The Fund may invest in the securities of mid-capitalization companies. As a result, the Fund's performance may be adversely affected if securities of mid-capitalization companies underperform securities of other capitalization ranges or the market as a whole. Securities of smaller companies trade in smaller volumes and are often more vulnerable to market volatility than securities of larger companies.
- **Non-Diversification Risk.** Although the Fund intends to invest in a variety of securities and instruments, the Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.
- **Other Investment Companies Risk.** The Fund will incur higher and duplicative expenses when it invests in other investment companies such as ETFs. There is also the risk that the Fund may suffer losses due to the investment practices of the underlying funds. When the Fund invests in other investment companies, the Fund will be subject to substantially the same risks as those associated with the direct ownership of securities held by such investment companies. Investments in ETFs are also subject to the ETF Risks described above.
- **Passive Investment Risk.** The Fund is not actively managed and the Adviser would not sell a security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index in accordance with the Index methodology. The Fund invests in securities included in the Index regardless of their investment merits. Other than in response to one of the triggers set forth above in accordance with the Index methodology, the Fund does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Fund.
- **Tracking Risk.** The Fund's return may not track the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, when the Fund uses a representative sampling approach, the Fund may not be as well correlated with the return of the Index as when the Fund purchases all of the securities in the Index in the proportions in which they are represented in the Index. To the extent the Fund calculates its NAV based on fair value prices and the value of the Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Index is not based on fair value prices), the Fund's ability to track the Index may be adversely affected.
- **Trend Lag Risk.** At least six consecutive trading days will elapse after the FTSE Eurozone Index first drops below its historical 200-day simple moving average (or conversely, first moves above such average) before the Index will switch from tracking the FTSE Eurozone Index to 3-Month US Treasury bills (or conversely, from 3-Month US Treasury bills to the FTSE Eurozone Index). As a result, if the FTSE Eurozone Index is in an overall positive trend, the Index and consequently the Fund may be adversely affected by a downward trend and/or volatility in the FTSE Eurozone Index for up to six consecutive trading days (or conversely, if the FTSE Eurozone Index is in an overall negative trend, the Index and consequently the Fund may not benefit from an upward trend and/or volatility in the FTSE Eurozone Index for up to six consecutive trading days). Accordingly, the methodology employed by the Index does not eliminate exposure to downward trends and/or volatility in the FTSE Eurozone Index or provide immediate exposure to upward trends and/or volatility in the FTSE Eurozone Index.

## Fund Performance

The following information provides some indication of the risks of investing in the Fund. The bar chart shows the annual return for the Fund. The table shows how the Fund's average annual returns for one year and since inception compare with those of the Index and a broad measure of market performance. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available on the Fund's website at [www.paceretfs.com](http://www.paceretfs.com) or by calling the Fund toll-free at 1-877-337-0500.

### Calendar Year Total Return as of December 31

For the year-to-date period ended June 30, 2019, the Fund's total return was 7.28%. During the period of time shown in the bar chart, the Fund's highest return for a calendar quarter was 8.67% (quarter ended June 30, 2017) and the Fund's lowest return for a calendar quarter was -8.93% (quarter ended June 30, 2016).

### Average Annual Total Returns (for the period ended December 31, 2018)

|  | 1 Year  | Since Inception<br>(12/14/15) |
|--|---------|-------------------------------|
| <b>Pacer Trendpilot® European Index ETF</b>  |         |                               |
| Return Before Taxes  | -15.98% | 0.89%                         |
| Return After Taxes on Distributions  | -16.11% | 0.83%                         |
| Return After Taxes on Distributions and Sale of Fund Shares                                    | -8.97%  | 0.82%                         |
| <b>Pacer Trendpilot European Index</b><br>(reflects no deduction for fees, expenses, or taxes) |         |                               |
|  | -14.65% | 2.26%                         |
| <b>FTSE Eurozone Index</b><br>(reflects no deduction for fees, expenses, or taxes)             |         |                               |
|  | -16.25% | 4.40%                         |

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Fund Shares" may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor. After-tax returns shown are not relevant to investors who hold their shares the Fund through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts.

## **Management**

### *Investment Adviser*

Pacer Advisors, Inc. serves as investment adviser to the Fund.

### *Portfolio Managers*

The Fund employs a rules-based, passive investment strategy. The Adviser uses a committee approach to managing the Fund. Bruce Kavanaugh, Vice President of the Adviser, and Michael Mack, Investment Analyst for the Adviser, have primary responsibility for the day-to-day management of the Fund and have served as Fund portfolio managers since the Fund's inception.

## **Buying and Selling Fund Shares**

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, the Exchange, and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares ("Creation Units"), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 50,000 shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash that the Fund specifies each day.

## **Tax Information**

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account. Distributions may be taxable upon withdrawal from tax-deferred accounts.

## **Payments to Broker-Dealers and Other Financial Intermediaries**

If you purchase the Fund through a broker or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for activities related to the marketing and promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary's website for more information.
