Summary Prospectus
May 1, 2019

www.paceretfs.com

Before you invest, you may want to review the Pacer Trendpilot® Fund of Funds ETF's (the "Fund") statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated April 30, 2019, are incorporated by reference into this summary prospectus. You can find the Fund's statutory prospectus, statement of additional information, shareholder reports and other information about the Fund online at www.paceretfs.com/media/. You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to ETF@usbank.com.

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of the Fund's shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the Fund's reports from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on a website, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. Please contact your financial intermediary to elect to receive shareholder reports and other Fund communications electronically.

You may elect to receive all future Fund reports in paper free of charge. Please contact your financial intermediary to inform them that you wish to continue receiving paper copies of Fund shareholder reports and for details about whether your election to receive reports in paper will apply to all funds held with your financial intermediary.

Investment Objective

The Pacer Trendpilot Fund of Funds ETF is an exchange traded fund ("ETF") that seeks to track the total return performance, before fees and expenses, of the Pacer Trendpilot Fund of Funds Index (the "Index" or the "Fund of Funds Index").

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets. This table and the Example below do not include the brokerage commissions that investors may pay on their purchases and sales of Fund shares.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.15%
Distribution and/or Service (12b-1) Fees	None
Other Expenses*	0.00%
Acquired Fund Fees and Expenses*	0.63%
Total Annual Fund Operating Expenses	0.78%

* Estimated for the current fiscal year.

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they were to invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

1 Year	3 Years
\$80	\$249

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies of the Fund

The Fund employs a “passive management” (or indexing) investment approach designed to track the total return performance, before fees and expenses, of the Index. The Index is based on a proprietary methodology developed and maintained by Index Design Group, an affiliate of Pacer Advisors, Inc., the Fund’s investment adviser (the “Adviser”).

The Index

The Fund of Funds Index uses an objective, rules-based approach to construct a portfolio that, as of each quarterly rebalance, is composed of the ETFs listed in the following table, each advised by the Adviser (collectively, the “Trendpilot ETFs”). Each of the Trendpilot ETFs is an index-based ETF that seeks to track the total return performance, before fees and expenses, of the underlying index listed in the following table (collectively, the “Trendpilot Indexes”). Each Trendpilot Index uses an objective, rules-based methodology to implement a systematic trend-following strategy that directs exposure (i) 100% to the “Equity Component” specified in the table below, (ii) 50% to the applicable Equity Component and 50% to 3-Month US Treasury bills, or (iii) 100% to 3-Month US Treasury bills, depending on the relative performance of the Equity Component and its 200-business day historical simple moving average (the “200-day moving average”). The calculation of the 200-day moving average for each Equity Component is based on the total return version of such Equity Component and reflects the reinvestment of dividends paid by the securities in such Equity Component.

Weight	Trendpilot ETF	Trendpilot Index	Equity Component
20%	Pacer Trendpilot® US Large Cap ETF	Pacer Trendpilot US Large Cap Index	S&P 500® Index
20%	Pacer Trendpilot® US Mid Cap ETF	Pacer Trendpilot US Mid Cap Index	S&P MidCap 400® Index
20%	Pacer Trendpilot® 100 ETF	Pacer NASDAQ-100 Trendpilot Index	NASDAQ-100® Index
40%	Pacer Trendpilot® International ETF	Pacer Trendpilot International Index	S&P Developed Ex-U.S. LargeCap Index

The Trendpilot Indexes

Each Trendpilot Index uses a systematic trend following strategy that directs the Trendpilot Index’s exposure to either the applicable Equity Component, 50% to the applicable Equity Component and 50% to 3-Month US Treasury bills, or 100% to 3-Month US Treasury bills and may stay in any of its three possible positions for an extended period of time. As described below, each Trendpilot Index will change its position based on the following indicators, and each change will become effective on the second business day after the indicator for the change is triggered.

Equity Indicator. When the applicable Equity Component closes above its 200-day moving average for five consecutive business days (the “Equity Indicator”), the exposure of the applicable Trendpilot Index will be 100% to the Equity Component, effective on the second business following the date of the Equity Indicator.

Once the Equity Indicator has been triggered, the exposure of the Trendpilot Index will next change to either be 50% to the Equity Component and 50% to 3-Month US Treasury bills if the 50/50 Indicator (described below) is triggered or 100% to 3-Month US Treasury bills if both the 50/50 Indicator and the T-Bill Indicator (described below) are triggered simultaneously, effective on the second business day following the date of the indicator(s).

50/50 Indicator. When the applicable Equity Component closes below its 200-day moving average for five consecutive business days (the “50/50 Indicator”), the exposure of the Trendpilot Index will be 50% to the Equity Component and 50% to 3-Month US Treasury bills, effective on the second business day following the date of the 50/50 Indicator. Following the effectiveness of the 50/50 Indicator, the exposure of the Trendpilot Index may be greater than or less than 50% with respect to the Equity Component and 3-Month US Treasury bills depending on their respective performance until either the Equity Indicator or T-Bill Indicator (described below) is triggered.

Once the 50/50 Indicator has been triggered, the exposure of the Trendpilot Index will next change to either be 100% to the Equity Component if the Equity Indicator is triggered or 100% to 3-Month US Treasury bills if the T-Bill Indicator (described below) is triggered, effective on the second business day following the date of the indicator.

T-Bill Indicator. When the applicable Equity Component’s 200-day moving average closes lower than its value from five business days earlier (the “T-Bill Indicator”), the exposure of the Trendpilot Index will be 100% to 3-Month US Treasury bills, effective on the second business day following the date of the T-Bill Indicator.

For example, if today is Wednesday and the applicable Equity Component’s 200-day moving average closes lower than it did on the fifth preceding business day (Wednesday of the preceding week), the T-Bill Indicator is triggered. Unlike the operation of the Equity Indicator and 50/50 Indicator, the closing values on the days in between today and the fifth preceding business day do not affect whether the T-Bill Indicator has been triggered; rather, the T-Bill Indicator simply compares today’s closing value to the closing value five business days earlier. However, the Trendpilot Index will not move directly from 100% exposure to the Equity Component to 100% exposure to 3-Month US Treasury bills unless the 50/50 Indicator was simultaneously triggered following the most recent triggering of the Equity Indicator.

Once the T-Bill Indicator has been triggered, the exposure of the Trendpilot Index will next change to be 100% to the Equity Component if the Equity Indicator is triggered, effective on the second business day following the date of the indicator. Once the T-Bill Indicator has been triggered, the Trendpilot Index will not return to its 50/50 position unless the Equity Indicator is first triggered, followed by the 50/50 Indicator being triggered.

The Index aims to mitigate, to some extent, the volatility of the Equity Component by tracking 3-Month US Treasury bills (instead of the Equity Component) when the applicable Equity Component is in a negative trend. Because the Equity Indicator, 50/50 Indicator, and T-Bill Indicator (collectively, the “Exposure Indicators”) for each Trendpilot Index operate independent of the Exposure Indicators for each other Trendpilot Index, the Fund of Funds Index may reflect equity exposure each Trendpilot ETF, for each Trendpilot ETF, or a mix of equity 3-Month US Treasury bill exposures for short or long periods of time. When the 50/50 Indicator or T-Bill Indicator has been triggered for a particular Trendpilot ETF, the Fund of Funds Index will have reduced or no exposure, respectively, to the applicable Trendpilot ETF’s Equity Component.

The Fund’s Investment Strategy

Under normal circumstances, at least 80% of the Fund’s total assets (exclusive of collateral held from securities lending) will be invested in the component securities of the Fund of Funds Index (*i.e.*, the Trendpilot ETFs). The Adviser expects that, over time, the correlation between the Fund’s performance and that of the Fund of Funds Index, before fees and expenses, will be 95% or better.

The Fund will generally use a “replication” strategy to achieve its investment objective, meaning it will invest in all of the component securities of the Index in the same approximate proportion as in the Index.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a ‘principal risk’ of investing in the Fund, regardless of the order in which they appear. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund’s prospectus entitled “Additional Information about the Principal Risks of Investing in the Funds.”

- **Currency Exchange Rate Risk.** The Fund’s assets may include exposure to investments denominated in non-U.S. currencies or in securities or other assets that provide exposure to such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund’s investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.
- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific industries, sectors or companies in which the Fund invests. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change.

- **Fixed Income Risk.** The value of the Fund's direct or indirect investments in fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. On the other hand, if rates fall, the value of the fixed income securities generally increases. The Fund may be subject to a greater risk of rising interest rates due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. The value of the Fund's direct or indirect investments in fixed income securities may be affected by the inability of issuers to repay principal and interest or illiquidity in debt securities markets.
- **Foreign Securities Risk.** Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.
- **Government Obligations Risk.** The Fund may invest in securities issued by the U.S. government. There can be no guarantee that the United States will be able to meet its payment obligations with respect to such securities. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.
- **High Portfolio Turnover Risk.** At times, the Fund may have a portfolio turnover rate substantially greater than 100%. A high portfolio turnover rate would result in correspondingly greater transaction expenses, including brokerage commissions, dealer mark ups and other transaction costs, on the sale of securities and on reinvestment in other securities and may result in reduced performance and the distribution to shareholders of additional capital gains for tax purposes. These factors may negatively affect the Fund's performance.
- **Large-Capitalization Investing Risk.** The Fund may invest in the securities of large-capitalization companies. As a result, the Fund's performance may be adversely affected if securities of large-capitalization companies underperform securities of smaller-capitalization companies or the market as a whole. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion.
- **Mid-Capitalization Investing Risk.** The Fund may invest in the securities of mid-capitalization companies. As a result, the Fund's performance may be adversely affected if securities of mid-capitalization companies underperform securities of other capitalization ranges or the market as a whole. Securities of smaller companies trade in smaller volumes and are often more vulnerable to market volatility than securities of larger companies.
- **New Fund Risk.** The Fund is new with no operating history. As a result, there can be no assurance that the Fund will grow to or maintain an economically viable size, in which case it may experience greater tracking error to its Index than it otherwise would at higher asset levels, or it could ultimately liquidate. The Fund's distributor does not maintain a secondary market in Fund shares.
- **Non-Diversification Risk.** Although the Fund intends to invest in a variety of securities and instruments, the Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.
- **Other Investment Companies Risk.** The Fund will incur higher and duplicative expenses when it invests in other investment companies such as ETFs. There is also the risk that the Fund may suffer losses due to the investment practices of the underlying funds. When the Fund invests in other investment companies, the Fund will be subject to substantially the same risks as those associated with the direct ownership of securities held by such investment companies. Investments in ETFs are also subject to the following risks: (i) the market price of an ETF's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; and (iii) trading of an ETF's shares may be halted for a number of reasons.

- **Passive Investment Risk.** The Fund is not actively managed and the Adviser would not sell a security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index in accordance with the Index methodology. The Fund invests in securities included in, the Index, regardless of their investment merits. The Fund does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Fund.
- **Shares of the Fund May Trade at Prices Other Than NAV.** As with all ETFs, Fund shares may be bought and sold in the secondary market at market prices. The price of Fund shares, like the price of all traded securities, will be subject to factors such as supply and demand, as well as the current value of the Fund's portfolio holdings. Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund trade on foreign exchanges that are closed when the Fund's primary listing exchange is open, the Fund is likely to experience premiums and discounts greater than those of domestic ETFs.
- **Tracking Risk.** The Fund's return may not track the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, when the Fund uses a representative sampling approach, the Fund may not be as well correlated with the return of the Index as when the Fund purchases all of the securities in the Index in the proportions in which they are represented in the Index. To the extent the Fund calculates its NAV based on fair value prices and the value of the Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Index is not based on fair value prices), the Fund's ability to track the Index may be adversely affected.
- **Trend Lag Risk.** At least six consecutive trading days will elapse after the applicable Equity Component first drops below its historical 200-day simple moving average (or conversely, first moves above such average) before a Trendpilot Index will switch from tracking the Equity Component to 3-Month US Treasury bills (or conversely, from 3-Month US Treasury bills to the Equity Component). As a result, if the Equity Component is in an overall positive trend, the Trendpilot Index and consequently the Fund of Funds Index and the Fund may be adversely affected by a downward trend and/or volatility in the Equity Component for up to six consecutive trading days (or conversely, if the Equity Component is in an overall negative trend, the Trendpilot Index and consequently the Fund of Funds Index and the Fund may not benefit from an upward trend and/or volatility in the Equity Component for up to six consecutive trading days). Accordingly, the methodology employed by each Trendpilot Index does not eliminate exposure to downward trends and/or volatility in the Equity Component and does not provide immediate exposure to upward trends and/or volatility in the Equity Component.

Fund Performance

Performance information for the Fund is not included because the Fund did not have a full calendar year of performance prior to the date of this Prospectus. In the future, performance information for the Fund will be presented in this section. Updated performance information is available on the Fund's website at www.paceretfs.com or by calling the Fund toll-free at 1-877-337-0500.

Management

Investment Adviser

Pacer Advisors, Inc. (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers

The Fund employs a rules-based, passive investment strategy. The Adviser uses a committee approach to managing the Fund. Bruce Kavanaugh, Vice President of the Adviser, and Michael Mack, Investment Analyst for the Adviser, have primary responsibility for the day-to-day management of the Fund and have served as Fund portfolio managers since the Fund's inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as the NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade

at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (“Creation Units”), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 50,000 shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash that the Fund specifies each day.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account. Distributions may be taxable upon withdrawal from tax-deferred accounts.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Fund through a broker or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for activities related to the marketing and promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary’s website for more information.
