

**PACER TRENDPILOT® SERIES**

Fund of Funds

Data as of 6/30/19

# PACER TRENDPILOT® FUND OF FUNDS INDEX

An index composed of Pacer Trendpilot® Indexes.

## INDEX COMPOSITION

## THE PACER TRENDPILOT FUND OF FUNDS:

- 1 Pacer determines the allocation within the index.
- 2 Pacer automatically rebalances on a quarterly basis and the exposure to each index is determined by each indexes current exposure.
- 3 You determine the allocation for the client depending on how much risk management exposure they may need.

<sup>(1)</sup>All Indexes shown are Total Return Indexes.

Source: S&P & Pacer Advisors. S&P has calculated the backtest gross of the ETF fees for the Trendpilot Index. Pacer Advisors is netting out the fees for this illustration. The hypothetical backtested index performance of the Pacer Trendpilot® Fund of Funds Index is shown net of fees and reflects the reinvestment of dividends. The annual total expense is 0.78%. The Pacer Trendpilot® Index was released on 5/3/2019. All data shown here is hypothetical, retrospectively calculated, and based on rules-based criteria applied retroactively with the benefit of hindsight and knowledge of factors that may have positively affected its performance, and cannot account for all financial risk or market and economic factors that may affect the actual performance. The start date for this index was chosen based on data from S&P. The results shown are hypothetical and do not reflect actual returns.

**BEFORE INVESTING YOU SHOULD CAREFULLY CONSIDER THE FUNDS' INVESTMENT OBJECTIVES, RISKS, CHARGES, AND EXPENSES. THIS AND OTHER INFORMATION IS IN THE PROSPECTUS. A COPY MAY BE OBTAINED BY VISITING [WWW.PACERETF.COM](http://WWW.PACERETF.COM) OR CALLING 1-877-337-0500. PLEASE READ THE PROSPECTUS CAREFULLY BEFORE INVESTING.**

An investment in the Funds is subject to investment risk, including the possible loss of principal. Pacer ETF shares may be bought and sold on an exchange through a brokerage account. Brokerage commissions and ETF expenses will reduce investment returns. There can be no assurance that an active trading market for ETF shares will be developed or maintained. The risks associated with these funds are detailed in the prospectus and could include factors such as calculation methodology risk, currency exchange rate risk, equity market risk, fixed income risk, foreign securities risk, geographic concentration risk, government obligations risk, high portfolio turnover risk, large and mid-capitalization investing risk, new fund risk, non-diversification risk, other investment companies risk, passive investment risk, tracking risk, trend lag risk, and/or special risks of exchange traded funds.

**DEFINITIONS OF CERTAIN DEFINED TERMS USED HEREIN:**

**Annualized average return** represents the calculated hypothetical rate of return that, if cumulatively applied to each relevant annual period during the time period indicated, would result in the actual cumulative rate of return for the entire period.

**Maximum return** represents the highest calendar year return as measured during the period indicated.

**Minimum return** represents the lowest calendar year return as measured during the period indicated.

**Annualized volatility** is based on monthly returns from the most recent date indicated on the page and expressed as a standard deviation percentage. Standard deviation is a measure of volatility and illustrates the extent of variation (whether higher or lower) that exists from the average given set of results. A low standard deviation indicates that the results tend to be very close to the average result (a low degree of volatility). In contrast, a high standard deviation indicates that the results are spread out over a large range of outcomes (a high degree of volatility). Because the standard deviation is based on historical data, it may not predict variability in annualized performance of the Pacer ETFs in the future.

**Maximum drawdown** represents the maximum percentage loss that the relevant index incurred from its peak level to its lowest level during the time period indicated.

**Annualized standard deviation** is the standard deviation multiplied by the square root of the number of periods in one year. Standard deviation of return measures the average deviations of a return series from its mean, and is often used as a measure of risk.
