

Pacer Trendpilot™ ETF Tracker as of 5/9/2025

The Pacer Trendpilot™ strategy is an objective, rules-based trend following strategy that changes exposure based on 3 indicators.

Equity Indicator: 100% Benchmark Index

When the Benchmark Total Return Index closes above its 200 day simple moving average (200d SMA) for five consecutive business days, the exposure of the Trendpilot™ Index will be 100% to the Benchmark Index.¹ From the equity position, the Index will change to the 50/50 position or the T-Bill position depending on the 50/50 Indicator and the T-Bill Indicator.

Price Signal

50/50 Indicator: 50% Benchmark Index/50% 3-Month US T-Bills

When the Benchmark Total Return Index closes below its 200 day SMA for five consecutive business days, the exposure of the Trendpilot™ Index will be 50% to the Benchmark Index and 50% to 3-Month US Treasury bills.¹ From the 50/50 position, the Trendpilot™ Index will return to the equity position or change to the T-Bill position depending on the Equity Indicator or T-Bill Indicator.

Extreme Valuation Trigger:

If at close of business the Index is **20% below** its 200 Day SMA, the exposure will automatically go to the 50/50 position. The Index will reset to the normal rules when the normal 50/50 Indicator is triggered from above the SMA or the Equity Indicator is triggered from below the SMA.

Trend Signal

T-Bill Indicator: 100% 3-Month US T-Bills

When the Benchmark Total Return Index's 200 day SMA closes lower than its value from five business days earlier, the exposure of the Trendpilot™ Index will be 100% to 3-Month US Treasury bills.* From the T-Bill position, the Trendpilot™ Index will change to the equity position when the Equity Indicator is triggered. The Index will not return to its 50/50 position unless the Equity Indicator is first triggered.

* Any trend change will become effective at the close of business on the first business day after the indicator for the change is triggered. The Index will be in a new position effective on the second business day.

¹ This trigger only applies to PTLC, PTMC, PTNQ, and PTIN.

Pacer Trendpilot™ US Bond ETF Tracker

The Pacer Trendpilot™ US Bond strategy is an objective, rules-based trend following strategy that changes exposure based on 3 indicators. The Index uses a "Risk Ratio" to signal a change in the position of the Index. The Risk Ratio is calculated by dividing the value of the iBoxx US Dollar Liquid High Yield Total Return Index ("HY Index") by the value of the iBoxx US Dollar Treasuries 7-10 Year Index ("T-Bond Index"). Any exposure change will become effective by the 6th business day.

High Yield Indicator: *100% iBoxx US Dollar Liquid High Yield Total Return Index*

When the Risk Ratio closes above its 100 day simple moving average (100 Day SMA) for five consecutive business days, the exposure of the Trendpilot™ Index will be 100% to the S&P U.S. High Yield Corporate Bond Total Return Index.¹ From the high yield position, the Index will change to the 50/50 position or the T-Bond position depending on the 50/50 Indicator and the T-Bond Indicator.

Price Signal

50/50 Indicator: *50% iBoxx US Dollar Liquid High Yield Total Return Index / 50% iBoxx US Dollar Treasuries 7-10 Year Index*

When the Risk Ratio closes below its 100 Day SMA for five consecutive business days, the exposure of the Trendpilot™ Index will be 50% to the HY Index and 50% T-Bonds.¹ From the 50/50 position, the Trendpilot™ Index will return to the high yield position or change to the T-Bond position depending on the High Yield Indicator or T-Bond Indicator.

Trend Signal

T-Bond Indicator: *100% iBoxx US Dollar Treasuries 7-10 Year Index*

When the Risk Ratio's 100 Day SMA closes lower than its value from five business days earlier, the exposure of the Trendpilot™ Index will be 100% to T-Bonds.¹ From the T-Bond position, the Trendpilot™ Index will change to the high yield position when the High Yield Indicator is triggered. The Index will not return to its 50/50 position unless the High Yield Indicator is first triggered.

¹ Any exposure change will become effective at the close of business on the sixth business day after the signal is triggered.

Pacer Trendpilot US Bond ETF

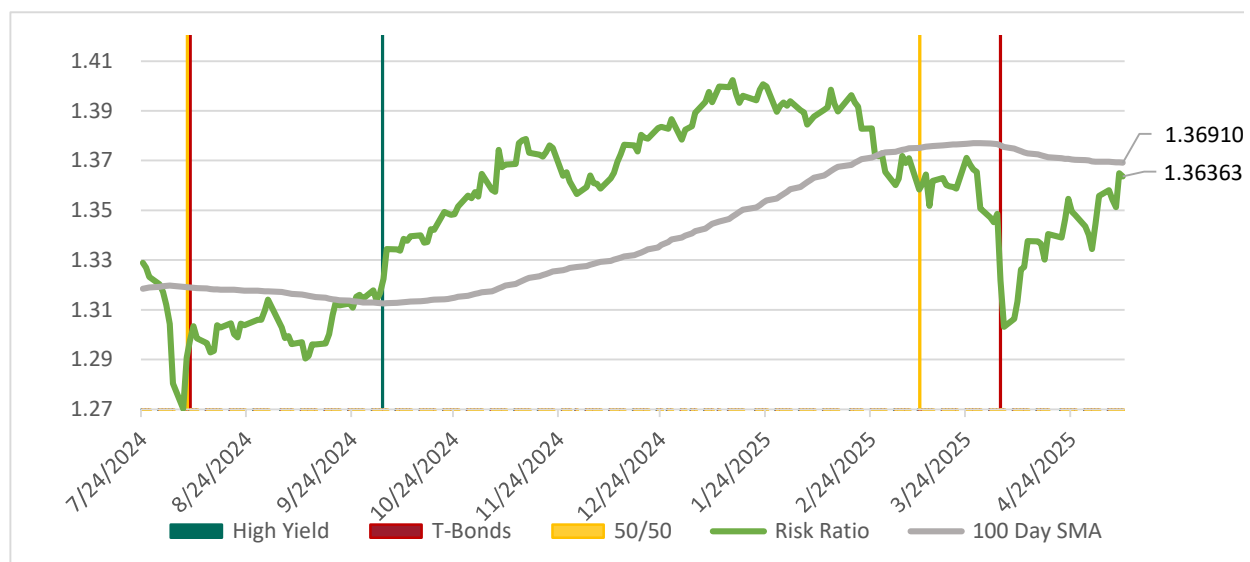

5/9/2025

Fund Ticker: PTBD

The Pacer Trendpilot™ US Bond ETF is an exchange traded fund that seeks to track the total return performance, before fees and expenses, of the Pacer Trendpilot™ US Bond Index. The Index uses a “Risk Ratio” to signal a change in the position of the Index.

Visit www.paceretfs.com for the [most recent month-end performance](#). Performance quoted represents past performance and does not guarantee future results. Investment return and principal value will fluctuate, so shares may be worth more or less when redeemed or sold. Current performance may be lower or higher than the performance quoted. You cannot invest directly in an index.

The 3-Month US T-Bill rate on 3/31/2025 was 4.2937%

An index is a measurement of the value of a section of the stock market. It is computed from the prices of selected stocks. Each index has its own calculation methodology and is usually expressed in terms of a change from a base value. The percentage change is more important than the actual numeric value. Any trend change will become effective at the close of business on the first business day after the indicator for the change is triggered. The Index will be in a new position effective on the second business day.
