STRATEGY OVERVIEW

Each of the individual ETFs that compose TRND follow an objective, rules based strategy that changes exposure based on three indicators. This allows for the possibility of multiple exposures for each underlying ETF.

100% Equity

Equity Indicator: When the Equity Component* closes **above** its 200 day simple moving average (200 Day SMA) for five consecutive business days, the exposure of the Trendpilot Index ("Index") will be 100% to the Equity Component.¹ From the equity position, the Index will change to the 50/50 position or the T-Bill position depending on the 50/50 Indicator and the T-Bill Indicator.

50% Equity, 50% T-Bills

50/50 Indicator: When the Equity Component closes **below** its 200 Day SMA for five consecutive business days, the exposure of the Index will be 50% to the Equity Component and 50% to 3-Month US Treasury bills.¹ From the 50/50 position, the Index will return to the equity position or change to the T-Bill position depending on the Equity Indicator or T-Bill Indicator.

100% T-Bills

T-Bill Indicator: When the Equity Component's 200 Day SMA closes lower than its value from five business days earlier, the exposure of the Index will be 100% to 3-Month US Treasury bills.¹ From the T-Bill position, the Index will change to the equity position when the Equity Indicator is triggered. The Index will not return to its 50/50 position unless the Equity Indicator is first triggered.

Legend:

- Equity Component
- - - 200 Day Simple Moving Average

The calculation of the 200 Day SMA for each equity component is based on a total return version of each index and reflects the reinvestment of dividends.

⁽¹⁾Any trend change will become effective at the market open on the second business day after the indicator for the change is triggered.

The graphs illustrate the Pacer Trendpilot® methodology based on hypothetical movements in a benchmark index and its 200 day simple moving average. This does not demonstrate historical data, and is not an indication of how any Index or Pacer Trendpilot® methodology will perform in the future. If the conditions mentioned in the graph are not satisfied, the trend will be the same as the trend on the immediately preceding business day.

Investment return and principal value will fluctuate, so shares may be worth more or less when redeemed or sold. Current performance may be lower or higher than the performance quoted. Visit www.paceretfs.com for the most recent month-end performance. Index returns are for illustrative purposes only. Index performance does not reflect any management fees, transaction costs or expenses. You cannot invest directly in an index.
⁽¹⁾Returns less than one year are cumulative.

NAV (net asset value) is the value of one share of the Fund calculated daily. The NAV return is based on the NAV of the Fund. It may not reflect the actual return for the investor.
Market Price is the price investors can buy and sell ETF shares for in the stock market and is used to calculate market return. It is based on the price at the NYSE listed exchange market close. This is when NAV is determined for most ETFs. If shares trade at another time, the return may differ. Market and NAV returns assume that dividends and capital gain distributions have been reinvested in the Fund at market price and NAV, respectively.
The S&P 500® Index is a popular gauge of large-cap U.S. equities and includes 500 leading companies, capturing approximately 80% coverage of available market capitalization.
The S&P MidCap 400® Index is a benchmark for mid-sized companies, measuring the performance of mid-sized companies and reflecting the risk and return characteristics of this market segment.
The NASDAQ-100® Index includes approximately 100 of the largest non-financial securities listed on The NASDAQ® Stock Market based on market capitalization. The NASDAQ-100® Index comprises securities of companies across major industry groups, including computer, biotechnology, healthcare, telecommunications, and transportation.
The S&P Developed Ex-US Large Cap Local Currency Index captures approximately 85% coverage of market capitalization excluding the U.S.
The S&P 1200 Index captures approximately 70% coverage of global market capitalization.

Before investing you should carefully consider the Fund’s investment objectives, risks, charges, and expenses. This and other information is in the prospectus. A copy may be obtained by visiting www.paceretfs.com or calling 1-877-337-0500. Please read the prospectus carefully before investing.

An investment in the Funds is subject to investment risk, including the possible loss of principal. Pacer ETF shares may be bought and sold on an exchange through a brokerage account. Brokerage commissions and ETF expenses will reduce investment returns. There can be no assurance that an active trading market for ETF shares will be developed or maintained. The risks associated with these funds are detailed in the prospectus and could include factors such as currency exchange rate risk, equity market risk, fixed income risk, foreign securities risk, government obligations risk, high portfolio turnover risk, large and mid-capitalization investing risk, new fund risk, non-diversification risk, other investment companies risk, passive investment risk, tracking risk, trend lag risk, and/or special risks of exchange traded funds.

*Estimated for the current fiscal year. Acquired Fund Fees and Expenses reflect the Fund’s pro rata share of the indirect fees and expenses incurred by investing in one or more acquired funds, such as mutual funds, business development companies, or other pooled investment vehicles. AFFE are reflected in the prices of the acquired funds and thus included in the total returns of the Fund.
