Pacer American Energy Independence ETF

A strategy-driven exchange traded fund (ETF) that aims to offer investors exposure to U.S. and Canadian companies that generate the majority of their cash flow from midstream energy infrastructure activities.

STRATEGY OVERVIEW

An objective, rules-based strategy that seeks to track the American Energy Independence Index and invest in qualifying midstream energy infrastructure companies.

1

Index Universe: C-Corp Companies/ MLPs (Master Limited Partnerships)

The U.S. and Canadian equity markets are screened for companies generating the majority of their cash flow from midstream⁽¹⁾ energy infrastructure activities.

⁽¹⁾Midstream energy infrastructure refers to the processing, storage, transportation, and distribution of crude oil, natural gas, refined products, and their related products as well as the transmission or storage of renewable energy.

2

Market Cap Screen

- Qualified securities are screened and excluded if they:
- Pay Incentive Distribution Rights (IDRs)
 - Have less than \$500 million in market cap

3

The American Energy Independence Index

- 80% U.S. and Canadian midstream companies
- 20% U.S. midstream MLPs and general partners of MLPs
- Weighted by modified market cap
- Rebalanced quarterly

(1)Returns less than one year are cumulative. NAV (net asset value) is the value of one share of the Fund calculated daily. The NAV return is based on the NAV of the Fund. It may not reflect the actual return for the investor.

Market Price is the price investors can buy and sell ETF shares for in the stock market and is used to calculate market return. It is based on the price at the NYSE listed exchange market close. This is when NAV is determined for most ETFs. If shares trade at another time, the return may differ. Market and NAV returns assume that dividends and capital gain distributions have been reinvested in the Fund at market price and NAV, respectively.

Weighted average market cap is the sum of each company's weight multiplied by its market cap.

Dividend yield is calculated using annual dividends per share divided by share price. There is no guarantee dividends will be paid.

Price to Funds from Operations is a measure of the cash generated by a business operation. FFO is calculated by adding depreciation and amortization to earnings and then subtracting any gains on sales.

Price to Distributable Cash Flow the cash generated by the business operations before accounting for capital expenditures.

Master Limited Partnership (MLP) is a publicly traded entity taxed as a partnership, which combines the tax benefits of a partnership with the liquidity of publicly traded securities. In order to qualify for the tax benefit, MLPs must generate at least 90% or more of their income from qualifying sources such as from production, processing, storage, and transportation of depletable natural resources and minerals.
